Journal of Materials Processing Technology

www.elsevier.com/locate/jmatprotec

Subject Index of Volume 121

Abrasive jet machining
A study on the shape of the surface generated by abrasive jet machining, 102
Adaptive mesh
Development and application of the adaptive mesh technique in the three-dimensional numerical simulation of the welding process, 167
Adhesion
Cold plasma treatment of polypropylene surface: a study on wettability and adhesion, 373
Alternative materials
Alternative materials for rapid tooling, 313
Aluminium
Metal flow in porthole die extrusion of aluminium, 107
Aluminium composite sheet
A damage model for fracture prediction of superplastic aluminium composite sheet, 301
ANN
A technical note on integrated product quality model using artificial neural networks, 77
Arbitrary shaped cup
Determination of optimal shapes for the stampings of arbitrary shapes, 116
Artificial neural networks
Prediction of the mechanical properties of forged TC11 titanium alloy by ANN, 1
Automobile panel
Application of integrated formability analysis in designing die-face of automobile panel drawing dies, 293
Automotive
A study of cast chilled iron processing technology and wear evaluation of hardened gray iron for automotive application, 94

Backward simulation
Die cavity design of near flashless forging process using FEM-based backward simulation, 173
Ball milling
Preparation and corrosion behavior of nanocrystalline iron gradient materials produced by powder processing, 383
Bifurcation theory
A simplified method of wrinkling simulation, 19
Blank holding gap
A simplified method of wrinkling simulation, 19
Brittle material
Ductile regime turning at large tool feed, 363
Brittle–ductile transition
Brittle–ductile transition in the diamond cutting of glasses with the aid of ultrasonic vibration, 243
Ductile regime turning at large tool feed, 363

Calculus of variations
The optimal control of material removal rate with fixed tool life and speed limitation, 238
Car bumpers
Cold plasma treatment of polypropylene surface: a study on wettability and adhesion, 373
Cast chill
A study of cast chilled iron processing technology and wear evaluation of hardened gray iron for automotive application, 94
Ceramic processing
Microwave plasma jet for material processing at 2.45 GHz, 143
Cermets
Combustion synthesis and quasi-isostatic densification of powder cermets, 157
Chipless machining
A parametric study of process parameters in external thread rolling, 341
Citrate method
Luminescent properties of Y_2O_3:Eu synthesized by sol–gel processing, 265
CNC
A technical note on integrated product quality model using artificial neural networks, 77
Cold plasma
Cold plasma treatment of polypropylene surface: a study on wettability and adhesion, 373
Combustion synthesis
Combustion synthesis and quasi-isostatic densification of powder cermets, 157
Composite rods
An investigation into the plastic deformation behavior within a conical die during composite rod extrusion, 226
Compound surface
The region division and NC machining of compound surfaces, 5
Compressible plasticity
A shear stress dependent ductile damage model, 87
Computer vision
Cost-effective solid reconstruction from an X-ray image, 207
Constitutive modeling
Combustion synthesis and quasi-isostatic densification of powder cermets, 157
Conventional metal spinning
Enhanced finite element models of metal spinning, 43
Convex deformation
On-line identification of thermally-induced convex deformation of the workpiece in surface grinding, 189
Corrosion
Preparation and corrosion behavior of nanocrystalline iron gradient materials produced by powder processing, 383
Critical depth of cut
Brittle–ductile transition in the diamond cutting of glasses with the aid of ultrasonic vibration, 243
Crystallizing π-bonding
Heat generation from friction and metal forming, 395
Cutter with a concave-arc generator curve
Models for contour quality evaluation of a toroidal cutter with a concave-arc generator, 234

Elsevier Science B.V.
PII: S0924-0136(02)00085-7

Cutting rate
The optimal control of material removal rate with fixed tool life and speed limitation, 238
CVN fracture
Properties and fracture of structural steels with yield stress of 373–737 MPa in ambient to nil ductility temperature range, 323

Damage
Ductile damage analysis of sheet metal forming, 148
Deburring
A study on the shape of the surface generated by abrasive jet machining, 102
Defect-free production part
An improved equivalent drawbead model and its application, 308
Deformation field
FEM simulation of the deformation field during the laser forming of sheet metal, 269
Deformation-energy
Effect of gauge length on uniaxial deformation-energy components of copper and brass sheets, 36
Depth of penetration
A predictive depth of penetration model for abrasive waterjet cutting of polymer matrix composites, 390
Design methodology
A systematic procedure for the design of a cold rolling mill, 69
Diamond turning
Brittle–ductile transition in the diamond cutting of glasses with the aid of ultrasonic vibration, 243
Ductile regime turning at large tool feed, 363
Die cavity design
Die cavity design of near flashless forging process using FEM-based backward simulation, 173
Die-face
Application of integrated formability analysis in designing die-face of automobile panel drawing dies, 293
Diffusion welding
Investigation of micro-crack occurrence conditions in diffusion bonded Cu-304 stainless steel couple, 136
Drawbead model
An improved equivalent drawbead model and its application, 308
Drawing dies
Application of integrated formability analysis in designing die-face of automobile panel drawing dies, 293
Dual-stream functions
A study on seamless tube in the planetary rolling process, 273
Ductile damage
A shear stress dependent ductile damage model, 87
Ductile regime machining
Ductile regime turning at large tool feed, 363
Ductility
Effect of gauge length on uniaxial deformation-energy components of copper and brass sheets, 36

Edge radius
A study on the shape of the surface generated by abrasive jet machining, 102
Elitist strategy
Metal-forming process optimisation by inverse evolutionary search, 403
Estimation
A neural network approach for the on-line estimation of workpiece height in WEDM, 252
Extrusion
Metal flow in porthole die extrusion of aluminium, 107
An investigation into the plastic deformation behavior within a conical die during composite rod extrusion, 226
Extrusion process
Analysis and design of a new manufacturing process for a support shaft using the finite element method, 259

FEA analysis
A parametric study of process parameters in external thread rolling, 341
FEM simulation
FEM simulation of the deformation field during the laser forming of sheet metal, 269
Filled degree at rib
Theory and experimental research on the process of rolling shape slab, 182
Finite element
Foil rolling: a new interpretation of experimental results, 50
A study on seamless tube in the planetary rolling process, 273
Finite element analysis
Enhanced finite element models of metal spinning, 43
An improved equivalent drawbead model and its application, 308
Finite element method
Die cavity design of near flashless forging process using FEM-based backward simulation, 173
Analysis and design of a new manufacturing process for a support shaft using the finite element method, 259
Finite-element modelling
Coupled thermo-mechanical finite-element modelling of hot ring rolling process, 332
Finite element simulation
Ductile damage analysis of sheet metal forming, 148
Foil rolling
Foil rolling: a new interpretation of experimental results, 50
Formability
Variability of sheet formability and formability testing, 350
Formation work method
Analysis and calculation of the forming pressure for the production of a shock-absorber tube by liquid extrusion, 15
Fracture
A damage model for fracture prediction of superplastic aluminium composite sheet, 301
Free resonating electrons
Heat generation from friction and metal forming, 395
Functionally gradient material
Preparation and corrosion behavior of nanocrystalline iron gradient materials produced by powder processing, 383
Fuzzy set
A systematic procedure for the design of a cold rolling mill, 69

Gas-assisted injection molding
Gas-assisted injection molding: the effects of process variables and gas channel geometry, 27
Genetic algorithm
Metal-forming process optimisation by inverse evolutionary search, 403
Glasses
Brittle–ductile transition in the diamond cutting of glasses with the aid of ultrasonic vibration, 243
Gouge-avoidance
The region division and NC machining of compound surfaces, 5
Gray iron
A study of cast chilled iron processing technology and wear evaluation of hardened gray iron for automotive application, 94
Grinding
On-line identification of thermally-induced convex deformation of the workpiece in surface grinding, 189

Hardness
Low-power laser hardening of steels, 414

Heat generation
Heat generation from friction and metal forming, 395
Helical groove
Design and NC machining of a toroid-shaped revolving cutter with a concave-arc generator, 217
High-speed precision cutting
An investigation of sticking behavior on the chip–tool interface using thermo-elastic–plastic finite element method, 285
Hot rolling
Estimating the resistance to deformation of the layer of scale during hot rolling of carbon steel strips, 60

IN718
Coupled thermo-mechanical finite-element modelling of hot ring rolling process, 332
Integrated formability analysis
Application of integrated formability analysis in designing die-face of automobile panel drawing dies, 293
Intelligent manufacturing
A technical note on integrated product quality model using artificial neural networks, 77
Intrinsic diffusion coefficients
Investigation of micro-crack occurrence conditions in diffusion bonded Cu-304 stainless steel couple, 136
Inverse formulation
Metal-forming process optimisation by inverse evolutionary search, 403
Iron
Preparation and corrosion behavior of nanocrystalline iron gradient materials produced by powder processing, 383

Jet velocity
A study on the shape of the surface generated by abrasive jet machining, 102

Kirkendall effect
Investigation of micro-crack occurrence conditions in diffusion bonded Cu-304 stainless steel couple, 136

Laser
Microwave plasma jet for material processing at 2.45 GHz, 143
Laser forming
FEM simulation of the deformation field during the laser forming of sheet metal, 269
Laser hardening
Low-power laser hardening of steels, 414
Layered composites
A predictive depth of penetration model for abrasive waterjet cutting of polymer matrix composites, 390
LDH
Variability of sheet formability and formability testing, 350
Light beam vacuum brazing
Repairing of the defects of the engine vanes of an aeroplane by light beam brazing, 23
Liquid extrusion
Analysis and calculation of the forming pressure for the production of a shock-absorber tube by liquid extrusion, 15
Low carbon steel
Estimating the resistance to deformation of the layer of scale during hot rolling of carbon steel strips, 60
Low-power CO_2 laser
Low-power laser hardening of steels, 414
Luminescent properties
Luminescent properties of Y_2O_3:Eu synthesized by sol–gel processing, 265

Marc/Mentat
Coupled thermo-mechanical finite-element modelling of hot ring rolling process, 332
Material behaviour
Material behaviour in metal cutting: strains, strain rates and temperatures in chip formation, 123
Material cutting
Microwave plasma jet for material processing at 2.45 GHz, 143
Material removal rate
The optimal control of material removal rate with fixed tool life and speed limitation, 238
Mathematical model
The region division and NC machining of compound surfaces, 5
Design and NC machining of a toroid-shaped revolving cutter with a concave-arc generator, 217
Models for contour quality evaluation of a toroidal cutter with a concave-arc generator, 234
Mechanical properties
Prediction of the mechanical properties of forged TC11 titanium alloy by ANN, 1
Metal cutting
Material behaviour in metal cutting: strains, strain rates and temperatures in chip formation, 123
Metal flow
Metal flow in porthole die extrusion of aluminium, 107
Metal forming
Variability of sheet formability and formability testing, 350
Metal-forming process optimisation by inverse evolutionary search, 403
Microstructure
Properties and fracture of structural steels with yield stress of 373–737 MPa in ambient to nil ductility temperature range, 323
Microwave plasma
Microwave plasma jet for material processing at 2.45 GHz, 143
Minimum circumscribed cylinder
Models for contour quality evaluation of a toroidal cutter with a concave-arc generator, 234
Modelling
Foil rolling: a new interpretation of experimental results, 50
MRC model
The optimal control of material removal rate with fixed tool life and speed limitation, 238

Nanocomposite
Preparation and corrosion behavior of nanocrystalline iron gradient materials produced by powder processing, 383
NC machining
The region division and NC machining of compound surfaces, 5
Design and NC machining of a toroid-shaped revolving cutter with a concave-arc generator, 217
NDT
Properties and fracture of structural steels with yield stress of 373–737 MPa in ambient to nil ductility temperature range, 323
Neural network
A neural network approach for the on-line estimation of workpiece height in WEDM, 252
Numerical simulation
Development and application of the adaptive mesh technique in the three-dimensional numerical simulation of the welding process, 167

Optimal blank design
Determination of optimal shapes for the stampings of arbitrary shapes, 116
OSUFT
Variability of sheet formability and formability testing, 350

Particle size
A study on the shape of the surface generated by abrasive jet machining, 102
Phase transformation
Low-power laser hardening of steels, 414
Phosphors
Luminescent properties of Y_2O_3:Eu synthesized by sol–gel processing, 265
Planetary rolling process
A study on seamless tube in the planetary rolling process, 273
Plastic deformation
Distortion stress, distortion strain and their physical concept, 202
Plastic forming
Analysis and calculation of the forming pressure for the production of a shock-absorber tube by liquid extrusion, 15
Plating technology
Laser sintered rapid tools with improved surface finish and strength using plating technology, 318
Polypropylene
Cold plasma treatment of polypropylene surface: a study on wettability and adhesion, 373
Porthole die
Metal flow in porthole die extrusion of aluminium, 107
Predictive model
A predictive depth of penetration model for abrasive waterjet cutting of polymer matrix composites, 390
Priority decision table
A systematic procedure for the design of a cold rolling mill, 69
Process modeling
A parametric study of process parameters in external thread rolling, 341
Process simulation
Gas-assisted injection molding: the effects of process variables and gas channel geometry, 27
Process variables
Gas-assisted injection molding: the effects of process variables and gas channel geometry, 27
Product quality
A technical note on integrated product quality model using artificial neural networks, 77

Quasi-isostatic pressing
Combustion synthesis and quasi-isostatic densification of powder cermets, 157

Rapid tooling
Alternative materials for rapid tooling, 313
Rapid tools
Laser sintered rapid tools with improved surface finish and strength using plating technology, 318
Repair
Repairing of the defects of the engine vanes of an aeroplane by light beam brazing, 23
Reverse engineering
Cost-effective solid reconstruction from an X-ray image, 207
Design and NC machining of a toroid-shaped revolving cutter with a concave-arc generator, 217
Rib geometry
Gas-assisted injection molding: the effects of process variables and gas channel geometry, 27
Rigid–plastic FEM
Theory and experimental research on the process of rolling shape slab, 182
Ring rolling
Coupled thermo-mechanical finite-element modelling of hot ring rolling process, 332
Rolling
A systematic procedure for the design of a cold rolling mill, 69
Rolling power parameters
Theory and experimental research on the process of rolling shape slab, 182

Scaling
Estimating the resistance to deformation of the layer of scale during hot rolling of carbon steel strips, 60
Scallop height
The region division and NC machining of compound surfaces, 5
Selective laser sintering
Alternative materials for rapid tooling, 313
Sensitivity analysis
Determination of optimal shapes for the stampings of arbitrary shapes, 116
Shear forming
Enhanced finite element models of metal spinning, 43
Sheet metal
Effect of gauge length on uniaxial deformation-energy components of copper and brass sheets, 36
FEM simulation of the deformation field during the laser forming of sheet metal, 269
Variability of sheet formability and formability testing, 350
Sheet metal forming
A simplified method of wrinkling simulation, 19
Ductile damage analysis of sheet metal forming, 148
Shell molding
A study of cast chilled iron processing technology and wear evaluation of hardened gray iron for automotive application, 94
Shock-absorber tube
Analysis and calculation of the forming pressure for the production of a shock-absorber tube by liquid extrusion, 15
Side sloping interface
Theory and experimental research on the process of rolling shape slab, 182
Sol–gel
Luminescent properties of Y_2O_3:Eu synthesized by sol–gel processing, 265
Solid reconstruction
Cost-effective solid reconstruction from an X-ray image, 207
Stand-off-distance
A study on the shape of the surface generated by abrasive jet machining, 102
Sticking
An investigation of sticking behavior on the chip–tool interface using thermo-elastic–plastic finite element method, 285
Strain
Material behaviour in metal cutting: strains, strain rates and temperatures in chip formation, 123
Strain rate
Material behaviour in metal cutting: strains, strain rates and temperatures in chip formation, 123
Strain tensor
Distortion stress, distortion strain and their physical concept, 202
Stream function
An investigation into the plastic deformation behavior within a conical die during composite rod extrusion, 226
Stress analysis
An investigation of sticking behavior on the chip–tool interface using thermo-elastic–plastic finite element method, 285
Stress tensor
Distortion stress, distortion strain and their physical concept, 202
Structural steels
Properties and fracture of structural steels with yield stress of 373–737 MPa in ambient to nil ductility temperature range, 323

Superplastic
A damage model for fracture prediction of superplastic aluminium composite sheet, 301
Support shaft
Analysis and design of a new manufacturing process for a support shaft using the finite element method, 259

TC11 titanium alloy
Prediction of the mechanical properties of forged TC11 titanium alloy by ANN, 1
Temperature
Material behaviour in metal cutting: strains, strain rates and temperatures in chip formation, 123
Temperature distribution
Development and application of the adaptive mesh technique in the three-dimensional numerical simulation of the welding process, 167
Tensile and CVN tests
Properties and fracture of structural steels with yield stress of 373–737 MPa in ambient to nil ductility temperature range, 323
Tensile fracture
Properties and fracture of structural steels with yield stress of 373–737 MPa in ambient to nil ductility temperature range, 323
Tensile testing
Effect of gauge length on uniaxial deformation-energy components of copper and brass sheets, 36
Thread rolling
A parametric study of process parameters in external thread rolling, 341
Tool feed
Ductile regime turning at large tool feed, 363
Toroid-shaped cutter with concave-arc generator
Design and NC machining of a toroid-shaped revolving cutter with a concave-arc generator, 217
Tribology
A study of cast chilled iron processing technology and wear evaluation of hardened gray iron for automotive application, 94
Type of deformation
Distortion stress, distortion strain and their physical concept, 202

Ultrasonic vibration cutting
Brittle–ductile transition in the diamond cutting of glasses with the aid of ultrasonic vibration, 243
Upper bound
A study on seamless tube in the planetary rolling process, 273
Upper-bound theorem
An investigation into the plastic deformation behavior within a conical die during composite rod extrusion, 226

Vane
Repairing of the defects of the engine vanes of an aeroplane by light beam brazing, 23
Vitrification
Microwave plasma jet for material processing at 2.45 GHz, 143

Waterjet cutting
A predictive depth of penetration model for abrasive waterjet cutting of polymer matrix composites, 390
Waveguide
Microwave plasma jet for material processing at 2.45 GHz, 143
Wear
A study of cast chilled iron processing technology and wear evaluation of hardened gray iron for automotive application, 94
Welding chamber
Metal flow in porthole die extrusion of aluminium, 107
Welding displacement
Development and application of the adaptive mesh technique in the three-dimensional numerical simulation of the welding process, 167
Welding stress
Development and application of the adaptive mesh technique in the three-dimensional numerical simulation of the welding process, 167
Wettability
Cold plasma treatment of polypropylene surface: a study on wettability and adhesion, 373
White iron
A study of cast chilled iron processing technology and wear evaluation of hardened gray iron for automotive application, 94
Wire electrical discharge machining
A neural network approach for the on-line estimation of workpiece height in WEDM, 252
Workpiece
On-line identification of thermally-induced convex deformation of the workpiece in surface grinding, 189
Workpiece height
A neural network approach for the on-line estimation of workpiece height in WEDM, 252
Wrinkling
A simplified method of wrinkling simulation, 19

X-rays
Cost-effective solid reconstruction from an X-ray image, 207

Y_2O_3:Eu
Luminescent properties of Y_2O_3:Eu synthesized by sol–gel processing, 265
